#### Project Contractual Details

<b>Project Title</b>	Smart Island Energy Systems
<b>Project Acronym</b>	SMILE
<b>Grant Agreement No.</b>	731249
<b>Project Start Date</b>	01-05-2017
<b>Project End Date</b>	31-10-2021
<b>Duration</b>	54 months

The project has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No 731249

## 1 Introduction

---

The overall scope of SMILE project is to demonstrate, in real-life operational conditions, a set of both technological and non-technological solutions adapted to local circumstances targeting distribution grids to enable demand response schemes, smart grid functionalities, storage, and energy system integration with the final objective of paving the way for the introduction of the tested innovative solutions in the market in the near future. To this end, three large-scale demonstrators have been implemented in three island locations in different regions of Europe with similar topographic characteristics but different policies, regulations, and energy markets: Orkneys (UK), Samsø (DK) and Madeira (PT). Actually, the three islands implemented pilot projects in a regional setting to develop a blueprint how a transition towards a sustainable and smart energy system can be successful in an island context. This knowledge can then be used to move forward the transition in mainland regions.

To do so, it is highly important that there is a continuous flow of knowledge from the projects to the regional and general public as well as to policy makers and the academic society. For this reason, frequent press releases were part of the SMILE dissemination strategy. The press releases highlighted the most interesting outcomes from pilot activities and in relation to commercialisation developments & replication opportunities. They were distributed to stakeholder and relevant media (online & print).

The press releases allowed to spread the knowledge and insights about the developed technologies towards new customers, countries, regions, sectors, markets and organisations. They helped to involve all relevant stakeholders into the discussion and especially informed the regional population about the newest developments on their islands. This inclusive approach is crucial for the success of the pilot projects. Through the press releases, citizen had the necessary information that allowed to develop a certain level of trust in the project. The press releases also made it possible for similar regions to learn from the insights from Samsø, Orkney and Madeira and replicate the technologies in their area. They also increased the overall visibility of the Horizon 2020 programme since relevant actors in the energy sectors on the islands and on the mainland were informed about the newest developments.

Furthermore, several local newspapers followed the SMILE evolution and published frequent news about the project. This highlights the large interest and the impact of the project on the local community.

In the following section, the references to the main press releases, articles on the press and the intervention in TV/radio have been reported.

<b>Title</b>	Duurzame eilanden Internationaal gezelschap in Stayokay “Sustainable islands; international company in Stayokay”
<b>Topic</b>	Seventy people gathered in the Stayokay (Texel, the Netherlands) to think about how islands such as Texel can make their energy supply more sustainable.
<b>Link</b>	<a href="https://www.texsecourant.nl/reader/23422/77553/duurzame-eilanden">https://www.texsecourant.nl/reader/23422/77553/duurzame-eilanden</a>
<b>Image</b>	<div data-bbox="422 638 1348 1355"> <p style="text-align: center;"><b>Duurzame eilanden</b> Internationaal gezelschap in Stayokay</p> <p style="text-align: center;"><small>2 dagen geleden · 3 minuten · Algemeen</small></p>  </div> <p>In de Stayokay kwamen afgelopen donderdag zeventig mensen bijeen om samen na te denken over de vraag hoe eilanden zoals Texel hun energievoorziening kunnen verduurzamen.]</p> <p><small>Foto: Pepijn Lijklema</small></p> <p><b>H</b>iervoor waren afgevaardigden van het Portugese eiland Madeira, de Schotse eilandengroep Orkney en het Deense eiland Samsø naar Texel gekomen om samen met experts uit de Waddenregio en de regio Noord-Holland praktijkvoorbeelden uit te wisselen.</p> <p>De conferentie was onderdeel van het Europese SMILE-project dat als doel heeft slimme praktijkoplossingen van eilanden op het gebied van energie en zelfvoorzienendheid te ontwikkelen en uit te wisselen. Donderdag was het openbare gedeelte van de driedaagse conferentie. In totaal waren hiervoor dertig afgevaardigden van Madeira, Orkney en Samsø naar Texel gekomen. Daarnaast waren er veertig Nederlanders aanwezig. Hoewel Texel officieel geen deel uitmaakt van het SMILE-project, hebben New Energy Coalition en Duurzame Alliantie Texel met succes gelobbyd om het evenement naar Texel te halen.</p> <p>Wethouder Vlaming opende de conferentie met een toespraak over de grote ambities van Texel en de uitdagingen die daarbij komen kijken. Mark de la Vieter van New Energy Coalition vatte vervolgens namens SMILE samen wat de verschillende eilanden elkaar te bieden hebben. Daarna presenteerde Pepijn Lijklema van Texlabs welke energieopgave Texel heeft door een visueel overzicht te geven van het Texelse energiegebruik en alle broeikasemissies. De afgevaardigden en betrokken bedrijven van Madeira, Orkney en Samsø mochten daarop hun ideeën presenteren om Texel zelfvoorzienender te maken gebaseerd vanuit hun eigen praktijk. “We zijn heel blij dat we de in SMILE ontwikkelde technieken en concepten hebben kunnen toelichten op Texel; we hopen dat Texel hiermee snel kan uitgroeien tot een koploper op het gebied van de energietransitie”, stelt De la Vieter die het evenement mocht organiseren vanuit SMILE in samenwerking met Texlabs.</p> <p>’s Middags waren interactieve workshops en brainstormsessies over samenwerking, lokale opwekking en slimmere balans tussen gebruik en opwekking. De uitkomsten hiervan zullen uitgewerkt en gedeeld worden met de deelnemers. Na de sessies werd in groepen van zes personen het energiespel Rondje Texel gespeeld. Dit educatieve bordspel is een simulatie, waarbij zes belanghebbende partijen binnen tien speelrondes Texel verder moeten helpen bij de energietransitie door gebruik te maken van alle verschillende manieren van energie opwekken. “Het was interessant om te horen dat de deelnemers van de andere eilanden direct de overeenkomsten zagen tussen wat er tijdens het spel allemaal mis kan gaan en wat er bij hen in de praktijk ook misgaat. De verschillende eilanden hebben laten weten graag te kijken in hoeverre we het spel ook op hun eilanden kunnen gebruiken”, besluit Lijklema die het spel speciaal ontwikkelde voor Texel. De dag werd afgesloten met een groot netwerk diner.</p>
